Why Add Advanced Inventory Control?

System Five Advanced Inventory Control (AIC) helps you track the amount and location of inventory down to the Zone/Aisle/Shelf/Bin level. Offer your customers the service they deserve, improve warehouse efficiency and reduce employee frustration. AIC is a real winner with any business that routinely carries backstock to meet customer demand.

Location Management

Establish locations for the sales floor and warehouse based on factors like sales velocity.

Pick & Putaway

Establish efficient pick paths and minimize handling by routing incoming freight accurately.

Cross Docking

Intercept freight that is going right back out to the customer using the cross docking feature.
