Why Add The Departments Functionality?

System Five Departments split out your accounting books into physical locations (store 1 vs store 2) or the functional areas of your business (sales vs service). You can of course still see that data as consolidated for big picture decision making. Departments functionality also separates out Inventory, Accounts Receivable, Accounts Payable and more.

Transfer Inventory

Queue transfers to fill orders or even stock balance stores using departmental highs and lows.

Separate Accounting

Manage expenses, bank recs, AR and even report on how you are performing by location.

Price Schedules

Become more competitive and deliberate about pricing across your various locations.
